

April 14, 2021 In honor of the holiday "World Day of Aviation and Cosmonautics" at the Department of "Industrial Transport", Doctor of PhD, Adilova N. D., together with the "Military Department of Aviation" within the framework of the " OTAN "program, an open curatorial hour was held on the topic:"60 years of Cosmonautics: Tungysh kazak garyshkeri Toktar Aubakirov".

On April 12, 1961, for the first time in history, a human flight into space took place on the Vostok-1 spacecraft and for the first time in the world made an orbital flyby of the planet Earth. Since then, more than five hundred and fifty earthlings from all of humanity have visited space. Among them are three representatives of Kazakhstan: cosmonaut pilots, national heroes of their country Toktar Aubakirov, Talgat Musabayev and Aydin Aimbetov. Each of them had their own way into space.

"The promotion of young people to strive for a dream, to live not only with earthly concerns, but to be able to dream! And look at the sky more often. The sky is sobering and inspiring. By and large, each person has his own space. And to open it-you need to be able to break away from everyday life. Only a great dream gives a person wings. I wish all Kazakhstanis to live with a dream and find wings" - the words of Toktar Aubakirov.

The open curatorial hour was attended by Lieutenant Colonel of the "Military Department" Manabekov M. B., a representative from the Council for Spiritual and moral education of the senior lecturer department "TE and LS" Shalaev V. V., head of the Department of "IT" Askarov B. Sh., deputy dean of the "TRF" for EW Ospangalieva M. T., senior curator. "IT" Atken E., senior lecturer Abdygalieva S. Zh., teacher Beisembayev D. M., students of the group OP-18-2 (14 students).
