

Working meeting of KSTU staff in the Federal state budgetary institution for civil defense and emergency situations (FC), Moscow, Russia.

On October 28-31, 2019, a working meeting with the staff of the scientific project "Forecasting of environmental consequences of emergencies at chemically hazardous facilities of the Republic of Kazakhstan", carried out at Karaganda state University, took place in the Federal state budgetary institution of the Institute for civil defense and emergency situations (FC), Moscow, Russia. This research Institute is the leading research center in this scientific direction among the EAEU countries.

KSTU was represented by PhD, associate Professor, associate Professor of the Department of Chemistry and chemical technologies Kudryavtsev S. S.-scientific Director of the project, doctor of technical Sciences Emelin P. V.-co-Director of the project. During the working meeting the participants were acquainted with scientific development in the field of industrial and chemical safety carried out in fgbu VNII GOCHS (FC). Representatives of KSTU made a presentation of the methodology developed by them to assess the environmental risk from possible emergencies at chemically hazardous facilities. Representatives of the research Institute noted the novelty, relevance and high scientific level of the methodology developed at KSTU. During the working meeting, the parties outlined further prospects for scientific cooperation in the field of forecasting and prevention of emergency situations.
