

The Program UNESCO

Students of the first year of master's degree in Geology and exploration of mineral deposits at Karaganda state technical University Zabigullov Aldiyar, Vladislav Medvedev, and Maria Rusina together with students from Spain and Germany were trained under the auspices of UNESCO as part of the project of the International center of competence in St. Petersburg mining education.

In the period from September 2019 to January 2020, undergraduates adopted the experience and imbued with the atmosphere of the cultural capital of Russia. First of all, the students liked the organization of Gornyy. The University that met them organized excursions to the main sights and historical places of the city. We also conducted a tour of the Museum of the Saint Petersburg mining University, the size and number of exhibits of which left very positive memories. "The University has a large number of resources that contribute to the scientific work of students. Modern laboratories, equipment of classrooms, professionalism of the teaching staff" - this is what the undergraduates noted.

Saint Petersburg mining University has a strict dress code. The decision to introduce uniforms was made by the Academic Council on November 24, 2000 in order to revive the historical traditions of the First higher technical educational institution in Russia. For this reason, undergraduates were given uniforms.

The program was experimental, and English was chosen as the main language of instruction. In addition to the subjects being retrained, undergraduates were trained in several other disciplines. Communication with representatives of other countries helped undergraduates better understand their culture, learn from their experience, and share their own. A variety of activities, frequented by students, also helped to strengthen their friendship.

At the end of their studies, undergraduates were solemnly awarded certificates of completion of the educational program.

Do not be afraid of difficulties if you have the opportunity to study at another University. In studying abroad, it is worth noting three main advantages

1. Travel and a new environment: you can visit places that you have ever seen on the Internet or on TV and would like to visit there.

2. Language practice: learning a new language in its natural environment is the fastest way.

3. Another system of education: it often happens that a University or College abroad introduces a completely different teaching method. At first, everything seems complicated and frightening, but later you will feel the benefits and gain useful skills of discussion, analysis, working on projects and public speaking.
