

On March 2, 2021, Karaganda Technical University, senior lecturer of the Department of Kazakh Language and Culture, Candidate of Philological Sciences Ashirbekova Anar Bokenovna, held a master class with students of the OP-20-2 group on the topic "Unmanned transport of the future". The master class was attended by the dean of the Road Transport Faculty Kurmasheva B.K., the teaching staff of the Transport and Road faculty, a total of 25 people.

The purpose of the master class: analysis of the prospects for the use of self-driving cars.

Tasks of the master class:

- * to review the history of the creation of self-driving cars;
- * identify the differences between self-driving cars and conventional ones;
- * identify the prospects for the use of self-driving cars.

Today we can observe the birth of new, bright ideas and technologies. One of the most interesting, promising and mass technologies is the idea of creating an unmanned transport.

The master class discussed the main reasons and goals for the creation and development of this technology, what it promises to give to humanity, what negative factors can be eliminated by the absence of the human factor.

During the master class, students got acquainted with many information about the driverless car. They received information about the history, development, future achievements and shortcomings of unmanned transport. In addition, we learned that self-driving cars are divided into consumer, industrial and military. Since in the future our profession is directly related to the driverless car, the information obtained will help you become a qualified specialist in this field.
